

# Asset Management

**MIM Management Services** ("MIM") have secured an agency agreement with Australia's leading provider of asset management systems – **Relegen**. Based in Sydney, **Relegen** has developed asset management systems for defence applications and are a 'top 20' SME provider of services to the Australian Defence forces.

The **baseLINE** software suite is Relegen's flagship product.

Ideally suited for organisations engaged in maintenance of engineering facilities, operating plants, capital equipment and infrastructure. **baseLINE** can be used as a stand-alone system or can be integrated with an organisation's existing asset management or maintenance planning system to further enhance its power and functionality. This is a key benefit for organisations that need more from their existing system but don't want the cost of maintaining dual systems or the costs associated with starting again and making a legacy system redundant.

The **baseLINE** suite enables organisations to centralise and manage large quantities of asset and logistics data in a smarter and more efficient manner. **baseLINE** software incorporates user-defined fields that ensures the database can be tailored to meet the needs of an organisation's individual management information system.

**baseLINE** is a necessary tool for capital-intensive organisations where increasing productivity, reducing cost of ownership and minimising safety risks are paramount. The system can be easily customised to suit the specific needs of industries such as Defence, Energy, Rail, Petrochemicals, Mining, Education, Aeronautical, Hospitals and health care facilities.

## **baseLINE** Offers Flexible, Scalable Solutions

Relegen and MIM are able to work with organisations of any size as solutions are totally scalable and able to be customised to meet almost any business requirements. Products and services can be delivered in a flexible format either as a software license purchase only or delivered as a fully implemented solution tailored to a client's specific needs.
