

The **MOST** advanced asset management software available

## What is **baseLINE**?

baseLINE is the most advanced enterprise asset management system on the market. It is the simplest, most flexible, reliable, and cost-effective solution for any level of business.

With baseLINE you get integration without duplication. It integrates with existing legacy systems and enables new data inputs to create a complete "library" of information on every asset a company operates. It is a single point of truth for all asset data. The revolutionary baseLINE system starts with a core framework that provides the fundamentals for a strategic approach to asset management. You can then configure baseLINE to meet your annual operational objectives by subscribing to one or more of 130+ separate software

services. By cherry-picking services and subscribing on an annual basis you pay only for what you need when you need it.

baseLINE is best of breed in terms of software design, development and distribution. It is a cutting edge concept that has been designed by practicing engineers, working at a mission critical level in an exacting Defence environment. The solution has also successfully transitioned to many other asset intensive industries including mining, manufacturing and recycling.

# The **MOST** advanced asset management software available

## How does it work?

baseLINE comes in three versions: baseLINE<sup>®</sup> (lite edition) for small business, home users and hobbyists; baseLINE<sup>kc</sup> (knowledge centre) for medium size businesses and/or individual sites; and baseLINE<sup>®</sup> (enterprise) for head office controlling multiple sites. Users select services to enhance baseLINE's core functionality, as appropriate to their specific operational requirements.

baseLINE services offer a vast array of capabilities including: auditing, asset tracking (barcode, RFID, microdot); remote data collection; certification and safety; condition and performance monitoring; maintenance and inventory management; depreciation; management of processes, workflows, documents and risk; and comprehensive reporting.

## Who uses it?

baseLINE's flexible system architecture works across all industries, and has been proven in demanding asset-intensive environments such as Defence, mining, manufacturing, recycling, transportation, health, telecommunications, energy, agriculture, and Government.

Today's version of baseLINE is tried, tested, and competitively superior to any other product available.

## Why use it?

You can't manage assets unless you know exactly what you have, how they're being used, who they are assigned to, and how they're functioning. Here are some of the many features that make baseLINE the most advanced EAM system available:

- Best-of-breed: developed by practicing engineers
- Build it yourself: fully flexible, user-defined system
- Cradle to the grave: manage every stage of an asset's lifecycle
- Integration without duplication: pull information from legacy systems for a single view of an asset
- Exceptional capability: over 130 services available
- Powerful workflow functionality: single point of truth for asset data and related business processes
- Web and mobile asset management: seamless remote access without compromising functionality
- Every asset is unique: Relegen's proprietary tagging system, assetDNA™, gives granularity on each asset to track against an actual user
- Advanced asset relationship management: manage every bit of data related to an asset, throughout its lifecycle
- Scalable for every size business: manage an unlimited number of assets, attributes, and history
- Future-proof investment: cutting-edge logic and approach.

## Who is Relegen?

Innovation, experience and excellence have positioned Relegen as a leader in the development and delivery of ground-breaking Enterprise Asset Management (EAM) solutions.

With a blue-chip customer base made up of Government, Defence, large multinationals and small business, Relegen has built a reputation among the business elite for technological innovation, excellence and reliability.

Experienced in the operation and maintenance of complex systems in defence, aviation, manufacturing, mining, occupational health, safety and environment and other asset intensive industries, Relegen backs up its proprietary baseLINE software and hardware with a contract engineering division that can handle anything from IT to project management and defence work. It's a potent combination of products and services.
